

Licensing

Introduction

All IMiN applications must be licensed individually. IMiN licensing is based on a concurrent use system. This means you can install IMiN on as many computers as you wish and you only need to purchase licenses for the number of people that will be using IMiN at any one time.

Obtaining Licenses

To obtain licenses, you must go through a simple multi step process. Before you continue, decide how many licenses you need for each application. Note that for each Communicator license, you will also need a Proxy license, since Communicator requires the Proxy to run and connect to IMiN.

To license your IMiN applications you must:

- 1) Open the IMiN Admin and navigate to the Licenses section.
- 2) Click the “Add...” button and select the application and number of licenses you wish to purchase. Click Ok when done.
- 3) The Admin will generate a License code. Copy and paste the entire license code into an email and send it to your local R&B Web Solutions representative.
- 4) When you receive your Unlock code from R&B Web Solutions, open the Admin licensing page again and copy and paste the Unlock code into the line relating to the licensed application.
